

## Communicate your research with new, visual tools

### Workshop on 10 June 2020 - online via Zoom

Welcome to this mobile video workshop in DTU Media Lab led by the Copenhagen-based science communication company, Outreach-Now.

**Before the workshop**, you need to download the KineMaster app for editing on your mobile. The smartphone (iPhone or Android) or iPad you are going to use should be no older than 2-3 years to be able to handle the video files with the editing tool. You also need an adapter for a microphone with a mini-jack plug if necessary (iPhone 7 and newer). Please also make sure you have at least 2 GB free space on your device. Make sure, your phone's camera is set to film in HD quality (1080p), check the phone's camera settings.

We would like to add you to a closed Facebook group, where you will upload your practice videos. So please have the Facebook app installed, at least for the day.

#### Programme

**Please note:** The final program will be available later

09:00 – 09:30	Introduction Why are we here? And what is the purpose of today's training?
09:30 – 11:00	First training session and evaluation of videos
11:00 – 11:30	Introduction to editing on mobiles
11:30 – 12:00	Combined lunch and development of narrative
12:00 – 14:45	Second training session and production of video
14:45 – 16:00	Evaluation of videos

#### Please think about:

- Where is the narrative, the story, in my research?
- How can I visually present my research?
- What items can I bring that I can use to explain/show my research? It can be anything: a skull, an apple, an umbrella, but you need to think about, what picture (item) is useful to describe the research on an immediate level.
